

Lecture: ISC 136
MWF 10:30-11:20

Lab: ISC 105
Thursday 9:30 - 12:20

Instructor: Isidro Bosch ISC 260
e-mail contact: bosch@geneseo.edu
Phone: 585-245-5303
Office hr. M: 1:00-2:00
T 3:30-4:30
W 11:30-1:00

Drawings of medusas, octopi and arachn

Course Description:

This course offers students an opportunity to study the great diversity of animal phyla beyond the well-known megafauna and to investigate how different lineages are designed to function as integrated units that we refer to as a 'body plan'. As you learn about the body plans of the most diverse among the nearly 35 animal phyla, we will also study their evolution, the position that individual lineages hold in the tree of life (that is, their phylogeny), and aspects of their physiology, development and ecology. This is not a traditional zoology course in that taxonomic names and anatomical nomenclature are not our fundamental learning outcomes. For our class, taxonomic names and nomenclature will serve as the basic language you will need to understand broader concepts of biology, such as diversity, form-function relationships, evolutionary history, development and more.

The laboratory portion of this course offers an opportunity to observe first-hand many of the animals studied in lecture, thus providing context to abstract lecture concepts. Lab activities provide a moderately-structured learning experience that encourage inquiry and independent-learning rather than following specific protocols. A limited number of dissections will be used to understand details of internal anatomy of selected groups. There are two major assignments associated with the laboratory portion of the course. One is a poster presentation on a current topic in the field and the other is the taxonomic identification and description of an aquatic species collected from a local stream habitat. Field outings for collection stream invertebrates are scheduled for the last week of April.

All the materials in this course including lectures, laboratory handouts, papers for weekly readings and more will be posted on our Brightspace course.

Books and Supplies:

1. Required Textbook: "Living Invertebrates" by Pearse and Buchsbaum
Blackwell and Boxwood, 1987.
This book will serve as a useful and fascinating reference for course content.
2. A bound dedicated laboratory notebook. This lab book should hold a record of your observations in the laboratory. Lab quizzes are "open lab notebook". At the end of the semester your lab notebook will be collected for grading.

Intended Learning Outcomes:

To demonstrate minimum competence a student must be able to accomplish the following:

- Characterize the evolutionary history of early animal life; evaluate conflicting hypotheses about the timing of major historical events and the processes that contributed to them.
- Categorize the range of diversity and functional attributes of animal body plans and identify key characters that define the body plans of major phyla.
- Summarize the phylogeny of the major animal groups (e.g. phyla, classes) and critically analyze evidence that contributes to our understanding of these relationships.
- Create, analyze, and interpret evolutionary trees.
- Describe the patterns of animal development from gametes to juvenile, identifying key attributes of different evolutionary lineages.
- Explain the role that developmental modifications have played in shaping the evolution of animal body plans and identify key developmental mechanisms that contributed to these evolutionary changes.
- Demonstrate aptitude in interpreting function/phylogeny on the basis of observations of animal form.
- Maintain an organized and practical written record of activities and observations in the laboratory.
- Demonstrate progress in ability to analyze and communicate biological information at a level appropriate for this course.

Success in meeting the intended learning outcomes will be evaluated through lecture exams, discussions, and laboratory activities, quizzes and assignments.

Evaluation:

1. Lecture exams: 3 semester exams, Feb 19, Mar 25, Apr 22, worth 12%, 15%, and 15% of the final grade and a fourth exam during finals week on May 14 worth 10%.
2. Homework assignments (9% three assignments)
3. In-class writing assignments related to readings (5%)
4. Laboratory quizzes (10%) and laboratory notebook (4%)
5. Group Projects (descriptions below)
Poster presentation on May 2 (10 %), Species Description on May 8 (5 %)
6. Contributions to class and laboratory activities/discussions (5 %)

Generally speaking, your work in the classroom will count toward 2/3 of your grade, and laboratory work with related projects will count for 1/3 of your grade. The grading scale will follow the standard Geneseo distribution with some minor deviations. There will be no curve, and no set letter grade allotment.

Total Score	Grade
93-100 %	A
89 - 92	A-
86 - 88	B+
82 - 85	B
79 - 81	B-
76 - 78	C+
71 - 77	C
66 - 70	C-
61 - 65	D
< 61	E

Shared Responsibilities to Our Learning Community:

Ideally our class will function as a learning community in which we work together to achieve intellectual growth and academic success, individually and collectively, as we try to explore the learning outcomes of this course. To achieve this goal as a group, each of us must give their best to the community. For my part, I promise to work hard to offer an organized course that will deliver intellectually interesting and biologically important content. I also commit to treating everyone with respect and as equal members of our learning community. Finally, I commit to listening to your ideas, concerns and constructive criticism and to try and understand things from your perspective. Below I outline some of what you might consider your individual responsibilities to the course and all its members.=

Responsibility to prioritize everyone's health and wellbeing

If at any time you fall ill, we ask that you protect our community and yourself by not coming to class. Lecture materials including presentation slides will be posted on Canvas. Should you miss a class due to illness it is important that you try to get additional notes from other students and that you check Canvas or ask your professor about any work you might have missed. Unfortunately, it will be very difficult to make up labs, but I promise I'll do everything possible to keep an excused absence from adversely affecting your performance in the course.

Responsibility to promote learning

Please arrive to class on time, stay through class, use your laptop and other technology only for class-related activities, and turn off your cell phone ringtones (including vibration mode). Technology can be beneficial to the process of your education. For this reason, laptops and smartphones are permitted so you can take notes and view classroom materials. Please refrain from using your phone for any reason not related to class (e.g., social media websites, e-mail, playing games, cell phone photography). These diversions can jeopardize your learning and also distract those around you. Our class will be held in a small classroom. From my vantage point I can very easily tell who is using their technology in ways that are incongruent with the flow of the class. Any student who disrupts lecture or distracts others will be cautioned, and if the behavior continues eventually the student will be asked to leave the classroom. If the behavior of other students around you affects your learning, please tell them and tell us.

We understand that in some emergency situations a student may need to leave a cell phone turned off. If that is the case, tell your instructor before class that you may be contacted.

Responsibility to Maintain Academic Integrity

We value academic integrity because dishonesty devalues the work of other students. College procedures to address serious academic dishonesty can be found at the [Dean of Academic Planning and Advising's](#) webpage.

Responsibility to Support Diversity and Equity

It is our intent to create a learning environment that supports all students. We believe the diversity that you bring to this class should be viewed as a resource, strength, and benefit. We strive to present materials and activities that are respectful of gender identity, sexuality, disability, age, socioeconomic status, ethnicity, race, nationality, religion, and culture. Your suggestions are encouraged to improve the course's effectiveness personally, or for other students or student groups. For ideas, questions, or concerns related to diversity, equity, and inclusion in the Biology Department, please reach out to bio-diversity@geneseo.edu.

Laboratory Syllabus:

The laboratory portion of the course will give you the opportunity to observe first-hand many of the organisms you will learn about in lecture. You are asked to participate in 3 dissections, two of fixed animals (squids and crayfish) and one of an anesthetized earth worm. If you have legitimate personal conflicts that preclude participation in dissections let your instructor know and may be assigned alternative activities.

One of your primary responsibilities in lab will be to keep a laboratory notebook as your record of significant concepts and observations from the laboratory. It should include primarily original drawings and observations (not copied from books). You will be able to use your lab notes as reference during laboratory quizzes. This is a privilege that may be revoked if students are found to be copying information from other sources into the notebook. A pre-lab summary paragraph of the planned activities should be written prior to each lab meeting.

Laboratory Schedule

Date	Topic for Laboratory	Pre-Lab Read
Jan 25	Introduction/Assignments	#1 Guide
Feb 1	Phylogeny Exercise	#2 Guide
8	Protista and Sponges	#3 Guide
15	Cnidaria	#4 Guide
22	Fertilization & Embryology	#5 Guide
29	Flatworms and Parasitism	#6 Guide, Quiz 1 Embryology
Mar 7	Molluscs I: Clams & Squid	#7 Guide, Quiz 2 Parasitism
	Spring Break	
21	Molluscs II: Snails	#8 Guide, Quiz 3 Snails
28	Annelid Diversity	#9 Guide, Quiz 4 Annelids
Apr 4	Aquatic Arthropods	#10 Guide, Quiz 5 Crustaceans
11	Land Arthropods; Insects	#11 Guide, Quiz 6 Insects
18	Stream Invert Collection	Field Trip
25	Species I.D./Poster Prep	(Due on Wed, May 8)
May 2	Poster Session	

You are asked to participate in two collaborative projects. The projects are intended to cultivate particular process skills needed in the study of biology while emphasizing different aspects of animal diversity.

Project 1: Description of Stream Invertebrate Species (5 % of score due Mon May 8)

For this project you are asked to collect and identify (using taxonomic keys) an invertebrate species from local aquatic habitats and to submit a formal written description of the species of no more than 5 pages. Examples of successful species descriptions from previous years and a grading rubric for the assignment will be provided. The report will be graded on overall organization, the analysis of key characters and a description of what other information is available on your species. To complete the project each group must submit a representative specimen preserved in 70% ethanol and stored in a vial labeled with the taxonomic order and species name, date, and the name of at least one student who participated in the identification.

Project 2: Poster Presentation (10% of total Score, due on Thursday May 2.

You are asked to explore an integrative question in the areas of phylogeny (taxonomic classification, relationships between different groups), evolution, or comparative function and form of invertebrates. Your sources for this research project must include a minimum of five peer-reviewed technical scientific papers (journal articles). Other sources (e.g., web sites) are acceptable only as supplements to the primary literature. The tentative date for the poster presentation is during the last lab meeting on Thursday, May 4. On that same day you should turn in a 2 page summary of your presentation with an annotated bibliography.

Tentative Schedule of Articles to Read for Friday Class Discussions

	Date of Article (Fridays)	Title/Topic	Student Leaders
1	Feb 2	Multicellularity: " The momentous transition to multicellular life may not have been so hard after all "	
2	Feb 9	Sponge "Feeding evolution: filter feeding to carnivory" (on Canvas)	
3	Feb 23	Ernst Haeckle: History of Science	
4	March 1	Regeneration: "Flatworms, the masters of regeneration- but nothing can happen without stem cells" (on Canvas)	
5	March 29	Leeches and Blood Feeding: " Blood Sucking Creatures "	
6	April 12	Flight: "The double identity of insect wings" (Canvas)	
7	April 19	Round worm lab rats: "Genetic regulation of organ development and programmed cell death" (Canvas)	

Tentative Lecture/Lab and Reading Schedule for Bio 346 Spring 2024

Part I

Lec #	Date	Topic	Readings (Ch are from Textbook)
Week 1- Jan 22			
1	Jan 24 W	Course Overview	
2	26 F	Animal Diversity	Ch1: 1-5
Week 2- Jan 29			
3	29 M	Classification and Phylogeny	Ch 30: 753-755
4	31 W	Evolutionary History	Ch 30:761-769 <i>Read Sokol (2018)</i>
5	Feb 2 F	Evolutionary History	<i>Discussion 1: Evolution of Multicellularity</i>
Week 3- Feb 6			
6	5 M	Protists and Multicellularity	Ch 2: 9-12, 23, 66-68. <i>Hwk #1 due</i>
7	7 W	Porifera	Ch 3: 71-82
8	9 F	Porifera and Placozoa	<i>Discussion 2: Carnivorous Sponges</i> <i>Ch 4: 91-94</i>
Week 4 Feb 12			
9	12 M	Cnidaria Body Plan, Scyphozoa	Ch 6: 152-162
10	14 W	Cnidaria Hydrozoa, Anthozoa	Ch 6:163-177, 134-142
11	16 F	Exam I Review	
Week 5 Feb 19			
11	19 M	Exam I (Lec 1-11)	

Part II

Week 5 Feb 19 Continued			
12	21 W	Embryology and Phylogeny	pp 755-759
13	23 F	Embryology and Phylogeny	<i>Discussion 3: Ernst Haeckel</i>
Week 6 Feb 26			
14	26 M	Comb Jellies (Ph. Ctenophora)	
15	28 W	Flatworms, Parasites	
16. Mar	1 F	Free Living Flatworms	<i>Discussion 4: Regeneration</i>
Week 7 Mar 4			
17	4 M	Flatworms and Phylogeny	Hwk #2 due
18	6 W	Mollusca, Cephalopods	
19	8 F	<i>No Class Work on Hwk #3</i>	
Week 8 March 9-16 Spring Break NO Classes			
Week 9 March 18 (Welcome back!)			
20	18 M	Bivalves, Gastropods	
21	20 W	Evolution of Eyes	Hwk #3 Due
22	22 F	Evolution of Eyes, Exam Review	
Week 10 March 25			
23	25 M	Exam II (Lec 12-22)	

Part III

Lec #	Date	Topic	Readings
Week 10 cont			
24	Mar 27 W	Annelid Body Plan, Diversity	
25	29 F	Annelid Oligochaetes	Discussion 5: <i>Blood Sucking Creatures</i>
Week 11 April 1			
26	1 M	Ecdysozoa and Arthropod Crustacea	
27	3 W	Arthropod: Crustacea	
28	5 F	Arthropods: Hexapods	
Week 12 April 8			
29	8 M	Eclipse Day No Class	
30	10 W	Insect Development	
31	12 F	Evolution of Flight	Discussion 6: <i>Evolution of Wings</i>
Week 13 April 15			
32	15 M	Evolution of Flight/Chelicerates	
33	17 W	Nematodes	
34	19 F	Exam III Review	Discussion 7: <i>Programmed Cell death</i>
Week 14 -April 22			
35	22 M	Exam III (Lec 25 -35)	

Part IV

Week 14 cont			
36	24 W	No Classes – GREAT Day	
37	26 F	Deuterostomes and Echinoderms	
Week 15- April 29			
38	29 M	Echinoderms	
39	May 1 W	Evolution of Development	
40	3 F	Hemichordates	
Week 16- May 6			
41	6 M	Chordate Characters	
42	8 W	Chordate Evolution	

Final Exam (Tuesday May 14 8:00-11:20)
(Lec 37 -42 + final in-class essay)
