

Acknowledgements:

We'd like to begin by thanking everyone who contributed directly to ProofSpace. This includes Professors O. Nicodemi, G. Reuter, C. Leary, and G. Towsley. We would also like to thank our Fall 2014 Teaching Assistants: John H., Stephanie W., Cathryn M., Natalie D., and Anna C. and the Fall 2014 students in the Introduction to Proofs course who were the first to use ProofSpace and find all of the errors we made. All of these people were responsible for helping us make improvements in the screencasts and problem sets.

We would like to thank SUNY and SUNY Geneseo for their support of this project, via the Innovative Instruction Technology Grant, as well as A. Baldwin and J. Dolce for their professional assistance. The work of Dr. T. Sundstrom and Dr. R. Talbot has also been very influential to our development of this space.

Aaron's Acknowledgements:

First and foremost, I would like to thank my family for their patience with me as we created the resources of ProofSpace. My daughter sacrificed “Daddy/Daughter Day” for a couple of months so that I could do this. My son was born during the creation of ProofSpace, and I wasn’t able to hold him quite as much as I wanted to. My wife exhibited an extraordinary amount of patience, endurance, and forgiveness as she took care of the kids with less help from me. I am eternally grateful for all of them.

I also thank my colleagues, teaching assistants, and students. Many of them have contributed to ProofSpace in one way or another, and without them, ProofSpace would not exist today. Several colleagues provided advice on pedagogy and curricular content, and many of them created resources for ProofSpace. My teaching assistants were not only useful for grading homework and leading recitations, but they were also there to do all of the tedious, technical things that I didn’t want to do (especially you, John H.!) They were patient, resourceful, and extremely underpaid, and I am ever grateful for their input, advice, and sacrifice. Finally, to my students in Introduction to Proofs, thank you, thank you, thank you! For those of you in my Spring 2014 class, you showed great patience as I experimented with the flipped classroom for the first time and changed how we did things every two weeks because I didn’t know what I was doing. Your feedback, advice, and encouragement had a major impact on me and really helped us figure out what we wanted ProofSpace to be. For those of you in my Fall 2014 class, you were the first to use the ProofSpace resources. Thank you for finding many of our mistakes, providing feedback on how to make the resources better, and having patience as we worked out the technical glitches.

Special shout-out to Suraj Uttamchandani, my former student, former teaching assistant, and current collaborator. Without your encouragement and initiative, I wouldn’t have attempted the flipped classroom when I did. I’m not a big fan of change, but every time you said, “Let’s try this idea,” I would go along with it. Sometimes it worked, rarely it didn’t, and I became a better educator because of our collaboration.

Suraj's Acknowledgements:

No doubt I would not have arrived at this project if a handful of individuals hadn’t encouraged me to consider education deeply: S. McKenna, C. Perri, P. Rault, and D. Hickey. An additional special thanks

go to R. Hall, T. Peck, D. Levy, and the Department of Mathematics for their support throughout my time at Geneseo.

A special shout-out goes to Dr. Olympia Nicodemi, who has been with me every step of the way, both within mathematics and without.

To my peers, colleagues in the MLC, and friends at Geneseo, as well as my family, I owe a great deal of gratitude for most everything.

A special thanks goes to my good friend S. Clark, who co-TAed a section of Introduction to Proofs with me and without whom I wouldn't have been able to get this project off the ground. My thanks also to that Spring 2014 section of Introduction to Proofs, for bearing with me while I tried some new things, some of which were more successful than others.

I'll extend an extraordinarily large thank you to Dr. Aaron Heap, who has been open-minded, thoughtful, good-natured, and altogether a pleasure to work with. I look to him as a mentor in how to be both rational and innovative.

I arrived at all this – this consideration of education and technology and learning – because of the guidance of the late Dr. Denice Szafran. She has inspired me thus far, and inspires me moving forward.
